## SAFETY PRECAUTIONS

Please read all instructions before attempting to unpack, install or operate this equipment and before connecting the power supply. Please keep the following in mind as you unpack and install this equipment:

- Always follow basic safety precautions to reduce the risk of fire, electrical shock and injury to persons.
- To prevent fire or shock hazard, do not expose the unit to rain, moisture or install this product near water.
- Never spill liquid of any kind on or into this product.
- Never push an object of any kind into this product through any openings or empty slots in the unit, as you may damage parts inside the unit.
- Do not attach the power supply cabling to building surfaces.
- Use only the supplied power supply unit (PSU). Do not use the PSU if it is damaged.
- Do not allow anything to rest on the power cabling or allow any weight to be placed upon it or any person walk on it.
- To protect the unit from overheating, do not block any vents or openings in the unit housing that provide ventilation and allow for sufficient space for air to circulate around the unit.
- Please completely disconnect the power when the unit is not in use to avoid wasting electricity.

## 1. INTRODUCTION

This 5 by 2 multi-format scaling switcher provides HDMI, USB-C, HDBaseT, and VGA inputs which can be freely selected for output at a scaled resolution of the user's choosing over the mirrored HDMI and HDBaseT outputs. The HDMI and USB-C ports support resolutions up to 4K@60 (4:4:4, 8-bit) while the HDBaseT output supports automatic colour subsampling of 4K50/60(4:4:4) sources to 4K50/60(4:2:0). The VGA inputs support resolutions up to WUXGA. The HDBaseT output provides a great solution to extend your audio and video up to 100 meters over a single run of Cat.6A cable as well as providing PoH power to compatible HDBaseT transmitters and receivers.

This unit also includes multiple analogue stereo audio inputs and a microphone input (with support for optional 48V phantom power) along with an analogue stereo output to provide a range of audio routing and mixing flexibility. The included audio DSP engine also provides auto-gain functionality, allowing for the mic source to be mixed with the audio from one of the video sources while reducing the background audio level in order to enhance the primary audio source. The ability to switch back and forth between mixed and non-mixed audio greatly simplifies the presentation experience.

A trigger input interface is also provided to allow the easy addition of a remote control keypad, or other trigger-supporting products, which can be installed within a podium or within a table in a conference room or classroom. This interface can allow the user to activate functions with the simple press of a button. Standard control is available via front panel buttons with an OSD, WebGUI, Telnet, and RS-232 making it exceptionally versatile.

## 2. APPLICATIONS

- /// Analogue and digital source integration
- /// Upscaling low resolution video for high-definition displays
- /// Conference centers
- /// Lecture halls
- /// Schools and universities

### 3. PACKAGE CONTENTS

- /// 1× HDMI/USB-C/VGA to HDMI/HDBaseT Scaler
- /// 1× 24V/5A DC Power Adapter
- /// 1× Remote Control (CR-192)
- /// 1× IR Blaster Cable
- /// 1× IR Extender Cable
- /// 1× 3.5mm to 9-pin D-sub Male Cable
- /// 1× 6-pin Terminal Block
- /// 1× Shockproof Feet (Set of 4)
- /// 1× Operation Manual

### 4. SYSTEM REQUIREMENTS

- /// HDMI/USB-C source equipment such as media players, video game consoles, or set-top boxes.
- /// VGA source equipment such as PCs, laptops, or set-top boxes.
- /// HDMI receiving equipment such as an HDTV, monitor, or audio amplifier.
- /// Analogue audio receiving equipment such as headphones, an audio amplifier, or powered speakers.
- /// A compatible HDBaseT receiver with PoH support is recommended.
- /// The use of Premium High Speed HDMI cables, and industry standard Cat.6, Cat.6A, or Cat.7 Ethernet cable is highly recommended.

## 5. FEATURES

- /// HDMI 2.0 and DVI 1.0 compliant
- /// HDCP 1.x and 2.2 compliant
- /// 5 video inputs (2×HDMI, 1×USB-C, 2×VGA)
- /// 2 mirrored video outputs (1×HDMI, 1×HDBaseT)
- /// Supports switching and scaling of all AV inputs for display over the mirrored HDMI and HDBaseT outputs
- /// Supports up to 4K UHD (18Gbps, 4K@50/60Hz 4:4:4, 8-bit) digital video input (HDMI, USB-C) and output (HDMI)
- /// VGA input supports resolutions up to 1080p60/WUXGA (RB)
- /// HDBaseT output supports resolutions up to 4K@60Hz (4:2:0, 8-bit) or 4K@30Hz (4:4:4, 8-bit). 4K@50/60Hz (4:4:4, 8-bit) output will be automatically colour space converted to fit within the available bandwidth
- /// HDBaseT output extends video, audio, and data over a single Cat.5e/6/7 cable and can reach distances up to 100m/328ft at 4K when using Cat.6a/7
- /// HDBaseT feature support: HD Video & Audio, 100BaseT Ethernet, PoH(PSE), and Control (Bi-directional IR/RS-232 pass-through)
- /// Supports pass-through of LPCM 2.0 digital audio
- /// Supports embedding any analogue audio source with any video source
- /// Audio mixer function allows the mixing of audio from any LPCM 2.0 audio source with the microphone input with auto-gain functionality
- /// Trigger input block supports direct input selection
- /// IR remote control provides discrete input source selection
- /// USB Type-C port provides up to 60W of power to connected devices
- /// Provides PoH (PSE) from the HDBaseT output to power a connected HDBaseT (PD) receiver (compatible receivers only)
- /// Comprehensive EDID and HDCP management
- /// Controllable via front panel controls with OSD, RS-232, Telnet, WebGUI, and triggers

## 6. OPERATION CONTROLS AND FUNCTIONS

### 6.1 Front Panel

- ❶ **POWER LED:** This LED will illuminate to indicate the unit is on and receiving power.
- ❷ **IR Window:** Accepts IR signals from the included IR remote for control of this unit only.
- ❸ **ENTER Button:** Press to confirm a selection within the OSD or to go deeper into a menu item.
- ❹ **MENU Button:** Press to enter the OSD menu, or to back out from menu items.
- ❺ **-/+ (MINUS/PLUS) Buttons:** Press to move up and down or adjust selections within OSD menus.  
*Note: Pressing "Menu" and "+" together will reset the output resolution to XGA@60Hz (1024×768). Pressing "Menu" and "-" together will reset the output resolution to 1080p@60Hz.*
- ❻ **SELECT Button:** Press this button to sequentially switch through the available inputs.
- ❼ **LOCK Button:** Press and hold for 3 seconds to lock all button functions on the front panel. Press and hold for 3 seconds again to release the lock function. The "LOCK" LED will be lit when the front panel is in the locked state.
- ❽ **Input & Status LEDs:** These LEDs indicate the currently selected source as well as the current front panel lock state.

## 6.2 Rear Panel

- 1 **HDMI 1~2 IN Ports:** Connect to HDMI source equipment such as media players, game consoles, or set-top boxes. DVI sources are supported with the use of an HDMI to DVI adapter.

**USB-C IN Port:** Connect to USB Type-C source equipment such as a PC or laptop. Can provide up to 60W of power to the connected device.

*Note: Not all devices with USB Type-C ports can support video output. Please verify that the intended device supports video output from the USB Type-C port before connecting it.*

**VGA 1~2 IN Ports:** Connect to VGA source equipment such as a PC or laptop. YUV sources, such as DVD players, are also supported with the use of a 15-pin to 3-RCA adapter.

- 2 **HDMI OUT Port:** Connect to an HDMI TV, monitor, or amplifier for digital video and audio output.

**CAT5e/6/7 OUT Port:** Connect to a compatible HDBaseT receiver with a single Cat.5e/6/7 cable for transmission of all data signals. PoH will also be supplied to a connected compatible PD receiver.

- 3 **SERVICE Port:** This slot is reserved for firmware update use only.
- 4 **LINE OUT Port:** Connect to powered speakers or an amplifier for stereo analogue audio output.
- 5 **MIC IN Port:** Connect to a standard microphone using a 6.35mm plug. Phantom power mics are supported.
- 6 **PHANTOM/OFF/ON Switch:** Set the switch to “ON” for standard condenser mics (5V) or “PHANTOM” for professional (48V) phantom power mics. Set the switch to “OFF” for mics that don’t require additional power.

- 7 **LINE IN Port:** Connect to the stereo analogue output of a device such as a CD player or PC.
- 8 **VGA 1~2 Ports:** Connect to the stereo analogue output of the device connected to the associated VGA input port.
- 9 **IR OUT Port:** Connect to an IR Blaster to transmit IR signals from the other end of the HDBaseT connection to devices within direct line-of-sight of the IR Blaster.
- 10 **IR IN Port:** Connect to an IR Extender to receive local IR control signals and extend them to devices connected to the other end of the HDBaseT connection. Ensure that the remote being used is within direct line-of-sight of the IR Extender.
- 11 **RS-232 BYPASS Port:** Connect to a PC, laptop, or serial controllable device with a 3.5mm adapter cable for the extension of RS-232 signals between both ends of the HDBaseT connection.
- 12 **INPUT CONTROL 6-pin Terminal Block:** This terminal block is used for direct source input selection. Short the ground pin (marked as "C") with any one of the following 5 pins to make individual source selections.

*Note: The pin assignments can be changed within the WebGUI. By default, the pins are assigned as follows:*

| Default Trigger Assignment |           |
|----------------------------|-----------|
| <b>Pin 1</b>               | HDMI 1 IN |
| <b>Pin 2</b>               | HDMI 2 IN |
| <b>Pin 3</b>               | USB-C IN  |
| <b>Pin 4</b>               | VGA 1 IN  |
| <b>Pin 5</b>               | VGA 2 IN  |

- 13 **RS-232 Port:** Connect directly to a PC, laptop, or other serial control device to send RS-232 commands to control the unit.
- 14 **LAN Port:** Connect directly, or through a network switch, to your PC/laptop to control the unit via Telnet/WebGUI and to extend the network across the HDBaseT connection.
- 15 **DC 24V Port:** Plug the 24V DC power adapter into this port and connect it to an AC wall outlet for power.

### 6.3 Remote Control

- ① **HDMI 1~2, USB-C & VGA 1~2:**  
Press any of these buttons to switch immediately to the corresponding input.
- ② **MENU:** Access the OSD menu.
- ③ **EXIT:** Exit the OSD menu.
- ④ **▲/▼:** Navigate up/down within the OSD menu items.  
**◀/▶ & VOL +/-:** Adjust the selected item's parameters (+) or (-) within the OSD menu or adjust output volume.  
**OK:** Confirm your selections within the OSD menu.
- ⑤ **AUTO ADJUST:** Automatically adjust and center analogue PC sources.
- ⑥ **RESET:** Return to factory default settings.

6.4 IR Cable Pinouts

IR Blaster Cable

IR Extender Cable

6.5 RS-232 Pinout and Defaults

| Serial Port Default Settings |       |
|------------------------------|-------|
| Baud Rate                    | 19200 |
| Data Bits                    | 8     |
| Parity Bits                  | None  |
| Stop Bits                    | 1     |
| Flow Control                 | None  |

RS-232 (Control)

RS-232 (Bypass)

## 6.6 OSD Menu

All functions of this unit can be controlled by using the OSD (On Screen Display) which is activated by pressing the MENU button on the front of the unit. Use the + (PLUS), – (MINUS), and ENTER buttons to navigate the OSD menu. Press the MENU button to back out from any menu item and then press it again to close the menu.

| MAIN MENU          |
|--------------------|
| <b>Video</b>       |
| <b>Picture</b>     |
| <b>Audio</b>       |
| <b>OSD</b>         |
| <b>Ethernet</b>    |
| <b>EDID</b>        |
| <b>System</b>      |
| <b>Factory</b>     |
| <b>Information</b> |

The individual functions of the OSD will be introduced in the following section. Items marked in **BOLD** are the factory default settings.

|              | PC Reset      |                         |

**1) Output Routing:** Select the video input to route to both outputs.

**2) Output Resolution:** Select the output resolution to use. Selecting a "Native" resolution option will make the unit automatically select an output resolution based on the detected EDID of the connected display.

*Note: 4K@50/60Hz (4:4:4, 8-bit) output resolutions will be automatically colour space converted to 4K@50/60 (4:2:0, 8-bit) when output over HDBaseT.*

- 3) **Aspect:** Select the aspect ratio to use when outputting the source. "Full" stretches the source to fill the output resolution, regardless of the original aspect ratio, while "Best Fit" will always attempt to retain the original source's correct aspect ratio by adding black bars if necessary. "Follow In" centers the source on the screen, without any scaling (1:1 pixel reproduction).
- 4) **No Signal Colour:** select the full screen colour to display when there is no signal.
- 5) **Blank:** Enable or disable blanking the video output.
- 6) **Freeze:** Enable or disable freezing the video output.
- 7) **Auto Setting:**
  - **Auto Sync Off:** Sets the amount of time to continue outputting sync with the "no signal colour" if there is no live source and no operations have been executed on the unit. Setting this to "OFF" forces the unit to always output sync.
  - **Auto Video Routing:** Enable or disable automatically switching to any newly detected source.
- 8) **HDCP Setting:** Provides control over the HDCP behaviour of each input.
- 9) **PC SETTING:** This menu is only available when a VGA source is active.
  - **PC Auto:** Provides a way to manually activate the auto detection of the VGA source's signal parameters. Press "Enter" to activate.  
*Note: For best results, a VGA source with a bright image that extends to all 4 edges of the screen should be displayed when this is activated.*
  - **PC H/V Position:** Set the horizontal and vertical position of the current VGA input's signal.
  - **PC Phase:** Set the PC phase setting for the current VGA input.
  - **PC Clock:** Set the PC clock setting for the current VGA input.
  - **PC Reset:** Reset all PC picture settings back to their factory defaults.

| AUDIO       |           |           |
|-------------|-----------|-----------|
| 2ND LEVEL   | 3RD LEVEL | 4TH LEVEL |
| Reset Audio |           |           |

- 1) **Audio Routing:** Set the audio routing behaviour of the unit.
  - **Follow User:** Audio routing will follow the individual audio routing selections made for each source in the “Follow User Setting” section.
  - **Follow Video:** All digital sources will use their native embedded audio content. The VGA sources will use the associated VGA 1~2 audio inputs.
  - **Line/VGA 1/VGA 2:** Forces the audio output to always use the selected analogue audio source.
- 2) **Follow User Setting:** Set the preferred audio routing to use for each source when “Follow User” is active. Select the preferred “Follow User” source for each input. Select “Reset Follow User Setting” to reset all follow user settings back to their factory defaults.
- 3) **Talk Over Setting:** Set the automatic background audio level behaviour to use when the mixer is active and “Talk Over” mode is enabled.
  - **Talk Over:** Enable or disable the use of the unit’s Talk Over mode which allows finer control over how the microphone input is handled while mixing sources.  
*Note: When Talk Over mode is disabled, or the mixer is disabled, the below settings will have no effect.*
  - **Depth:** Sets the amount the primary audio source’s volume level will be decreased when the Talk Over feature is triggered. The available adjustment range is 0 to 100%.
  - **Trigger Threshold:** Set the microphone’s signal detection threshold. The Talk Over will be activated when the microphone’s signal is over the threshold and lasting longer than the trigger time. The available adjustment range is -100dB to 0dB.
  - **Trigger Time:** Set the length of time a signal must be over the current signal detection threshold in order to trigger the microphone Talk Over function. The available adjustment range is 0 to 20 seconds.
  - **Attack Time:** Set the mixer attack time, the length of time used

fading the microphone's audio into the output mix. The available adjustment range is 0 to 20 seconds.

- **Hold Time:** Set the length of time to wait, when no audio over the threshold level is detected, before beginning to release the Talk Over mix. The available adjustment range is 0 to 20 seconds.
- **Release Time:** Set the mixer release time, the length of time used fading the microphone's audio out of the output mix once the mic's signal level falls below the set threshold. The available adjustment range is 0 to 20 seconds.
- **Reset Talk Over:** Reset all Talk Over settings back to their factory defaults.

**4) Output Mixer:** Set the microphone mixing mode of the unit.

- **Off:** Disable the audio mixer.
- **On:** Enable the audio mixer. Audio from the current source and the microphone will be mixed together.
- **Mic Only:** Output only the microphone audio source. This mode will override all other audio selections.

**5) Volume On Mic Gain:** Set the microphone input's volume level when the microphone is an active audio source (mixed or unmixed).

**6) Volume On HDMI/HDBT/Analogue Out:** Set the volume level for each audio output type.

*Note: LPCM 2.0 sources only.*

**7) Mute On HDMI/HDBT/Analogue Out:** Enable or disable muting the audio of each output type.

**8) HDMI/HDBT/Analogue Out Delay:** Set the amount of time (in milliseconds) to the delay the audio output. Primarily used if audio and video seem to be out of sync.

*Note: LPCM 2.0 sources only.*

**9) Reset Audio:** Reset all audio settings back to their factory defaults.

|                   |                      | 0~255 <b>(0)</b>   |
|                   | Gate                 | 0~255 <b>(192)</b> |
|                   |                      | 0~255 <b>(168)</b> |
|                   |                      | 0~255 <b>(1)</b>   |
|                   |                      | 0~255 <b>(254)</b> |
|                   | Reset Static IP      |                    |
| IP                | [Current IP Address] |                    |
| MAC               | [Unit's MAC Address] |                    |

- 1) **IP Mode:** Set the unit's Ethernet port to Static or DHCP mode. When DHCP mode is selected, all IP address information will be assigned automatically by the local DHCP server. When Static is selected, the IP address, netmask and gateway must be set manually.
- 2) **Telnet Login:** Enable or disable requiring authentication when connecting via Telnet.
- 3) **Static IP Setting:** The unit's static IP address, netmask, and gateway address can be set here.

*Note: The unit's default static IP address is 192.168.1.50.*

- 4) **Reset Static IP:** Reset all Static IP settings back to their factory defaults.
- 5) **IP/MAC:** Displays the unit's MAC address and current IP address.

| EDID        |                              |

## 6.7 WebGUI Control

### Device Discovery

Please obtain the “Device Discovery” software from your authorised dealer and save it in a directory where you can easily find it.

Connect the unit and your PC/Laptop to the same active network and execute the “Device Discovery” software. Click on “Find Devices on Internet” and a list of devices connected to the local network will show up indicating their current IP address.

*Note: The unit’s default IP mode is DHCP.*

By clicking on one of the listed devices you will be presented with the network details of that particular device.

- 1) **IP Mode:** If you choose, you can alter the static IP network settings for the device, or switch the unit into DHCP mode to automatically obtain proper network settings from a local DHCP server. To switch to DHCP mode, please select DHCP from the IP mode drop-down, then click “Save” followed by “Reboot”.
- 2) **WebGUI Hotkey:** Once you are satisfied with the network settings, you may use them to connect via Telnet or WebGUI. The network information window provides a convenient link to launch the WebGUI directly.

## WebGUI Overview

After connecting to the WebGUI's address in a web browser, the login screen will appear. Please enter the appropriate user name and password then click "Submit" to log in.

*Note: The default user name and password is "admin".*

A login form with a light gray background and rounded corners. It contains two input fields: "USER NAME:" and "PASSWORD:". To the right of the password field is a "LOGIN" button.

On the left side of the browser you will see the following menu tabs where all primary functions of the unit are controllable via the built in WebGUI. The individual functions will be introduced in the following sections.

Clicking the "Logout" button in the Authentication section of the "Audio and System" tab will automatically log the currently connected user out of the WebGUI and return to login page.

## 6.7.1 Status and Video Tab

This tab is divided up into multiple sections (Status, Video, Picture, PC, and EDID) allowing for all functions of the unit to be viewed and controlled directly. If desired, the numerical value for many of the items can be entered directly by typing it in the box above the slider bar. Press “Enter” to accept the newly entered value.

The screenshot displays the 'Status and Video' tab interface, which is organized into several sections:

- Status and Video (Top Left):** Contains a list of system information including Video Out Routing (HDMI1), Audio Out Routing (Follow Video), Audio Out Mixer (Off), Source Resolution (1920x1080p 60), Source HDCP (2.2), Output Resolution (3840x2160p 60), HDMI Out Colorspace (YUV444), HDMI Out HDCP (2.2), HD-BT Out Colorspace (YUV420), HD-BT Out HDCP (2.2), HD-BT Out Status (Linked), SN, and Revision.
- Video (Middle Left):** Features dropdown menus for Out Routing (HDMI1), Out Resolution (Native HDMI), Aspect (Full), No Signal Color (Black), Blank (Off), Freeze (Off), Auto Sync Off (Off), Auto Video Routing (Auto Switch), and HDCP settings for HDMI1, HDMI2, and USB-C (all set to Refer to Display).
- Picture (Middle):** Includes sliders and input boxes for Red, Green, Blue, and White levels (all at 512), R and G offsets (all at 512), B offset (512), Brightness (30), Contrast (30), Hue (30), Saturation (30), Sharpness (0), Noise Reduction (Off), and a Reset Picture button (EXE).
- PC (Top Right):** Contains settings for Auto Setup (EXE), H-Position (120), V-Position (34), Phase (53), Clock (120), and a Reset button (EXE).
- EDID (Bottom Right):** Shows dropdowns for HDMI1 EDID (FHD 2CH), HDMI2 EDID (FHD 2CH), and USB-C EDID (FHD 2CH), along with a Reset EDID button (Off) and two 'Upload USER EDID' buttons.

- 1) **Status:** The section provides detailed information about the current status the video and audio output signals. The unit’s serial number and current firmware version is also displayed here.
- 2) **Video:** This section provides video routing settings, output resolution selection, and control over the video output signal’s format as well as setting HDCP behaviour for the applicable inputs.

■ **Out Routing:** Use the dropdown to select the video source to output.

■ **Out Resolution:** Use the dropdown to select the output resolution to use. Selecting a “Native” resolution option will make the unit automatically select an output resolution based on the detected EDID of the connected HDBaseT or HDMI display.

*Note: 4K@50/60Hz (4:4:4, 8-bit) output resolutions will be automatically colour space converted to 4K@50/60 (4:2:0, 8-bit) when output over HDBaseT.*

■ **Aspect:** Selects the aspect ratio to use when outputting the source. “Full” stretches the source to fill the output resolution, regardless of the original aspect ratio, while “Best Fit” will always attempt to retain the original source’s correct aspect ratio by adding black bars

if necessary. "Follow In" centers the source on the screen, without any scaling (1:1 pixel reproduction).

- **No Signal Colour:** Use the dropdown to select the full screen colour to display when there is no signal. Black, white, blue red, or green may be selected.
- **Blank:** Enable or disable blanking the video output.
- **Freeze:** Enable or disable freezing the video output.
- **Auto Sync Off:** Sets the amount of time to continue outputting sync with the "no signal colour" if there is no live source and no operations have been executed on the unit. Setting this to "OFF" forces the unit to always output sync.
- **Auto Video Routing:** Enable or disable automatically switching to any newly detected source.
- **HDMI 1~2/USB-C HDCP:** Use each dropdown to select the HDCP behaviour for the associated input.
  - Support Off: Completely disables support for HDCP on that input.
  - Refer to Source: Makes the input port support the same HDCP version as required by the connected source.
  - Refer to Display: Makes the input support the HDCP version of the currently connected displays.

**3) Picture:** This section provides control over the scaled video output's colour, brightness, contrast, hue, saturation, sharpness and noise reduction.

- **R/G/B Colour Gain:** These sliders provide control over the red, green, and blue colour gain level of the scaled output.
- **R/G/B Offset:** These sliders provide control over the red, green, and blue colour offset level of the scaled output.
- **Brightness:** Provides control over the overall brightness of the scaled output image.
- **Contrast:** Provides control over the overall contrast of the scaled output image.
- **Hue:** Provides control over the hue shift of the scaled output image.
- **Saturation:** Provides control over the colour saturation level of the scaled output image.
- **Sharpness:** Provides control over the amount of sharpness processing to apply to the scaled output image.
- **Noise Reduction:** Provides control over the aggressiveness

of the digital noise reduction processing when applied to the scaled output image. Selecting “Off” disables all noise reduction processing.

- **Reset Picture:** Press the “EXE” button to reset all picture settings back to their factory defaults.

- 4) **PC:** This section is only active when a VGA input is selected and provides control over the H/V position, clock, and phase of the VGA signal as well as providing a way to automatically adjust these settings.

- **Auto Setup:** Provides a way to manually activate the auto detection of the VGA source’s signal parameters.

*Note: For best results, a VGA source with a bright image that extends to all 4 edges of the screen should be displayed when this is activated.*

- **H/V Position:** Set the horizontal and vertical position of the current VGA input’s signal.

- **Phase:** Set the PC phase setting for the current VGA input.

- **Clock:** Set the PC clock setting for the current VGA input.

- **Reset:** Press the “EXE” button to reset all PC settings back to their factory defaults.

- 5) **EDID:** This section provides control over the EDID settings of all digital inputs. This unit provides the option of three standard EDIDs, two sink sourced EDIDs and two user uploaded EDIDs that can be assigned to each input port individually.

*Note: In some rare cases it is possible for custom or external EDIDs to cause compatibility issues with certain sources. If this happens, it is recommended to switch to one of the 3 default EDIDs for maximum compatibility.*

This unit provides the following 3 default EDIDs:

| Unit's default EDIDs |                                                                  |
|----------------------|------------------------------------------------------------------|
| <b>FHD 2CH</b>       | 1920×1080p@60Hz (4.95Gbps) & 8-bit colour, LPCM 2.0              |
| <b>UHD 2CH</b>       | 3840×2160p@30Hz (10.2Gbps) & Deep Colour (8/10/12-bit), LPCM 2.0 |
| <b>UHD+ 2CH</b>      | 3840×2160p@60Hz (18Gbps) & Deep Colour (8/10/12-bit), LPCM 2.0   |

*Note: In most cases, assigning a new EDID to an input will cause the affected input to briefly blink out while the source adapts to the new information.*

- **HDMI 1~2/USB-C EDID:** Use the dropdown to select the EDID to use with the associated input. The new EDID will be used immediately.
- **Reset EDID:** Use the dropdown to select an EDID to apply to ALL digital inputs at the same time. The new EDID will be used by all inputs immediately.
- **Upload User EDID:** To upload a new User EDID, please click the "Upload User EDID" button for the User EDID you would like to change. An EDID Upload window will appear, allowing you to locate and upload the preferred EDID file (\*.bin format) from a local PC. Once the correct file has been selected, please click the "Open" button in the window, and the file will be transferred to the unit.

### 6.7.2 Audio and System Tab

This tab is divided up into multiple sections (Audio, OSD, System, Ethernet, Reset, FWUpdate and Authentication) allowing for all audio and system functions of the unit to be viewed and controlled directly. If desired, the numerical value for many of the items can be entered directly by typing it in the box above the slider bar. Press “Enter” to accept the newly entered value.

1) **Audio:** This section provides control over how audio is routed within the unit as well as control over audio mixing, delay, individual output volume and the microphone’s gain level.

■ **Out Routing:** Use the dropdown to select the audio routing behaviour of the unit.

- Follow User: Audio routing will follow the individual audio routing selections made for each source at the bottom of this section.
- Follow Video: All digital sources will use their native embedded audio content. The VGA sources will use the associated VGA 1~2 audio inputs.
- Line/VGA 1/VGA 2: Forces the audio output to always use the selected analogue audio source.

- **Mixer:** Set the microphone mixing mode of the unit.
  - Off: Disable the audio mixer.
  - On: Enable the audio mixer. Audio from the current source and the microphone will be mixed together.
  - MIC Only: Output only the microphone audio source. This mode will override all other audio selections.
- **Mic Volume:** Sets the microphone input's volume level when the microphone is an active audio source (mixed or unmixed).
- **HDMI/HDBT Volume:** Set the volume level for the HDMI and HDBaseT audio output.
- **Analogue Volume:** Set the volume level for the line output.
- **HDMI/HDBT Mute:** Mute or unmute the HDMI and HDBaseT audio output.
- **Analogue Mute:** Mute or unmute the line audio output.
- **HDMI/HDBT Delay:** Use the dropdown to set the amount of time (in milliseconds) to the delay the audio output. Primarily used if audio and video seem to be out of sync.

*Note: LPCM 2.0 sources only.*
- **Analogue Delay:** Use the dropdown to set the amount of time (in milliseconds) to the delay the audio output. Primarily used if audio and video seem to be out of sync.
- **HDMI 1/HDMI2/USB-C/VGA1/VGA2 Audio Routing:** Use each dropdown to set the preferred audio routing to use for each source when "Follow User" is selected.
- **Talk Over:** Use the dropdown to enable or disable the use of the unit's Talk Over mode which allows finer control over how the microphone input is handled while mixing sources.

*Note: When Talk Over mode is disabled, or the mixer is disabled, the below settings will have no effect.*
- **Depth(%):** Sets the amount the primary audio source's volume level will be decreased when the Talk Over feature is triggered. The available adjustment range is 0 to 100%.
- **Threshold(dB):** Set the microphone's signal detection threshold. The Talk Over will be activated when the microphone's signal is over the threshold and lasting longer than the trigger time. The available adjustment range is -100dB to 0dB.

- **Trigger Time(0.1s):** Set the length of time a signal must be over the current signal detection threshold in order to trigger the microphone Talk Over function. The available adjustment range is 0 to 20 seconds (in 0.1 second steps).
  - **Attack Time(0.1s):** Set the mixer attack time, the length of time used fading the microphone's audio into the output mix. The available adjustment range is 0 to 20 seconds (in 0.1 second steps).
  - **Hold Time(0.1s):** Set the length of time to wait, when no audio over the threshold level is detected, before beginning to release the Talk Over mix. The available adjustment range is 0 to 20 seconds (in 0.1 second steps).
  - **Release Time(0.1s):** Set the mixer release time, the length of time used fading the microphone's audio out of the output mix once the mic's signal level falls below the set threshold. The available adjustment range is 0 to 20 seconds (in 0.1 second steps).
  - **Reset Audio:** Press the "EXE" button to reset all audio settings back to their factory defaults.
- 2) **OSD:** This section provides controls over the appearance of the unit's informational OSD and OSD menu.
- **H/V Position:** Use the sliders to set the horizontal and vertical position of the OSD menu.
  - **Transparency:** Controls the transparency level of the OSD menu's background. The available range is from Level 0 (fully opaque) to Level 7 (fully transparent).
  - **Timer:** Controls how long to wait before automatically closing the OSD menu if there is no user activity. The timeout can be set to up to 60 seconds, or disabled completely.
  - **Display:** Controls the behaviour of the OSD informational display. Selecting "5S", "10S" will show the information display for a short time (5 or 10 seconds) after a source or display change. Selecting "Off" will disable the info display. Selecting "On" will always show the info display.
  - **Reset OSD:** Press the "EXE" button to reset all OSD settings back to their factory defaults.

3) **System:** This section provides control over trigger configuration, remote control ID, and saving/restoring the system's configuration.

- **Remote Control:** Use the dropdown to select the custom code pairing that matches the dipswitch settings of the IR remote you wish to use.

*Note: The dipswitches on the IR remote are located under the battery compartment cover.*

- **Trigger In 1~5:** Use each dropdown to set the input to be selected when the associated trigger is activated.
- **Reset Trigger In:** Press the "EXE" button to reset all trigger settings back to their factory defaults.
- **Configuration Save:** To export a configuration to your PC, click the "SAVE" button and then select the preferred save location on the local PC. Next, click the "Save" button to complete the file export.
- **Configuration Upload:** To load a previously saved configuration from your PC, click the "UPLOAD" button to open the file selection window and then select the associated configuration (\*.xml format) located on your local PC. After selecting the file, click the "Open" button to import the new configuration. The associated configuration will then be restored.

4) **Ethernet:** This section provides a way to change the unit's Ethernet related settings and displays the unit's MAC address as well.

- **IP Mode:** The unit's IP mode may be switched between Static IP and DHCP. In Static IP mode the IP, netmask and gateway addresses may be manually set. When in DHCP mode, the unit will attempt to connect to a local DHCP server and obtain IP, netmask and gateway addresses automatically. Please press "Save" after making any changes to the IP configuration or mode.

*Note: If the IP address is changed then the IP address required for WebGUI/Telnet access will also change accordingly.*

- **Telnet Login:** Enable or disable requiring authentication when connecting via Telnet.

5) **Reset:** Press either of the "EXE" buttons to reset the unit's settings back to their factory defaults. Selecting the "All Except Ethernet" button will leave the current Ethernet settings intact after the reset is complete.

- 6) **FW Update:** To update the unit's firmware, click the "Choose File" button to open the file selection window and then select the firmware update file (\*.bin format) located on your local PC. After selecting the file, click the "Upload" button to begin the firmware update process. After the upgrade is complete, the unit will reboot automatically.
- 7) **Authentication:** The admin login password may be changed here. Type the preferred new password in the space provided and then press the "Save" button to change it. Clicking the "Logout" button will immediately log you out of the WebGUI and return you to the login page.

*Note: The default password is "admin".*

## 6.8 Telnet Control

Before attempting to use Telnet control, please ensure that both the unit and the PC are connected to the same active networks.

Start your preferred Telnet/Console client, or use the built in client provided by most modern computer operating systems. After starting the client, connect by using the current IP address of the unit and port 23 (if the communication port number used by the unit has not been changed previously). This will connect us to the unit we wish to control and commands may now be entered directly.

*Note 1: If the IP address of the unit is changed then the IP address required for Telnet access will also change accordingly.*

*Note 2: This unit defaults to DHCP mode. The current IP address can be verified using the OSD menu or the Device Discovery software. The default communication port is 23.*

## 6.9 Serial and Telnet Commands

| COMMAND                                                            |
|--------------------------------------------------------------------|
| Description and Parameters                                         |
| <b>help</b> ↵                                                      |
| Show the full command list.                                        |
| <b>help N1</b> ↵                                                   |
| Show details about the specified command.<br><b>N1</b> = {Command} |
| <b>? </b> ↵                                                        |
| Show the full command list.                                        |
| <b>? N1</b> ↵                                                      |
| Show details about the specified command.<br><b>N1</b> = {Command} |

| COMMAND                            |                                                                                                                                                                                                                                                                                                                                                                                                               |    |          |     |           |   |            |   |            |   |            |   |               |   |          |   |              |

**COMMAND****Description and Parameters****get in N1 timing string** ←

Show the index number and description of the current resolution detected on the specified input.

Available values for **N1**:

|   |          |
|---|----------|
| 1 | [HDMI 1] |
| 2 | [HDMI 2] |
| 3 | [USB-C]  |
| 4 | [VGA 1]  |
| 5 | [VGA 2]  |

**get out N1 color space** ←

Show the colour space format currently used by the specified output.

Available values for **N1**:

|   |                  |
|---|------------------|
| A | [HDMI output]    |
| B | [HDBaseT output] |

Possible response values:

|   |             |
|---|-------------|
| 0 | [Unknown]   |
| 1 | [RGB]       |
| 2 | [YUV 4:2:2] |
| 3 | [YUV 4:4:4] |
| 4 | [YUV 4:2:0] |

**set out A timing N1** ←

Set the output resolution to use for the HDMI/HDBaseT output.

Available values for **N1**:

|   |                  |
|---|------------------|
| 0 | [Native HDMI]    |
| 1 | [Native HDBaseT] |
| 2 | [640×480@60Hz]   |
| 3 | [800×600@60Hz]   |
| 4 | [1024×768@60Hz]  |
| 5 | [1280×768@60Hz]  |
| 6 | [1280×800@60Hz]  |
| 7 | [1280×1024@60Hz] |

8.3 Audio Specifications

8.3.1 Digital Audio

| HDMI Input / Output |            |
|---------------------|------------|
| LPCM                |            |
| Max Channels        | 2 Channels |
| Sampling Rate (kHz) | 48         |
| Bitstream           |            |
| Supported Formats   | None       |
| HDBaseT Output      |            |
| LPCM                |            |
| Max Channels        | 2 Channels |
| Sampling Rate (kHz) | 48         |
| Bitstream           |            |
| Supported Formats   | None       |

### 8.3.2 Analogue Audio

| Analogue Input  |              |
|-----------------|--------------|
| Max Audio Level | 2Vrms        |
| Impedance       | 48k $\Omega$ |
| Type            | Unbalanced   |

| Analogue Output    |                           |
|--------------------|---------------------------|
| Max Audio Level    | 2Vrms                     |
| THD+N              | < -85dB@0dBFS 1kHz (A-wt) |
| SNR                | > 102dB@0dBFS             |
| Frequency Response | < $\pm 1$ dB@20Hz~20kHz   |
| Crosstalk          | < -63dB@10kHz             |
| Impedance          | 470 $\Omega$              |
| Type               | Unbalanced                |

### 8.4 Cable Specifications

| Cable Length          | 1080p |        | 4K30             | 4K60             |
|-----------------------|-------|--------|------------------|------------------|
|                       | 8-bit | 12-bit | (4:4:4)<br>8-bit | (4:4:4)<br>8-bit |
| High Speed HDMI Cable |       |        |                  |                  |
| HDMI Input            | 15m   | 10m    | 5m               | 3m               |
| HDMI Output           | 15m   | 10m    | 5m               | 3m               |
| USB-C Cable           |       |        |                  |                  |
| USB-C Input           | 2m    |        |                  | 1m               |
| VGA Cable             |       |        |                  |                  |
| VGA Input             | 2m    |        | ×                |                  |
| Ethernet Cable        |       |        |                  |                  |
| Cat.5e/6              | 100m  |        | 70m              | ×                |
| Cat.6A/7              | 100m  |        | 100m             | ×                |

#### Bandwidth Category Examples:

- **1080p (FHD Video)**
  - Up to 1080p@60Hz, 12-bit colour
  - Data rates lower than 5.3Gbps or below 225MHz TMDS clock
- **4K30 (UHD Video)**
  - 4K@24/25/30Hz & 4K@50/60Hz (4:2:0), 8-bit colour
  - Data rates higher than 5.3Gbps or above 225MHz TMDS clock but below 10.2Gbps
- **4K60 (UHD<sup>+</sup> Video)**
  - 4K@50/60Hz (4:4:4, 8-bit)
  - 4K@50/60Hz (4:2:0, 10-bit HDR)
  - Data rates higher than 10.2Gbps

### 8.5 HDBaseT Features

| HDBaseT Feature Set        | Transmitter     |
|----------------------------|-----------------|
| Video & Audio Extension    | Supported       |
| LAN Extension              | Supported       |
| Send power to Receiver     | Supported (PoH) |
| Accept power from Receiver | Unsupported     |
| IR Extension               | Supported       |
| RS-232 Extension           | Supported       |
| USB 2.0 Extension          | Unsupported     |

## 9. ACRONYMS

| ACRONYM       | COMPLETE TERM                                      |
|---------------|----------------------------------------------------|
| <b>ADC</b>    | Analogue-to-Digital Converter                      |
| <b>ASCII</b>  | American Standard Code for Information Interchange |
| <b>Cat.5e</b> | Enhanced Category 5 cable                          |
| <b>Cat.6</b>  | Category 6 cable                                   |
| <b>Cat.6A</b> | Augmented Category 6 cable                         |
| <b>Cat.7</b>  | Category 7 cable                                   |
| <b>CLI</b>    | Command-Line Interface                             |
| <b>DAC</b>    | Digital-to-Analogue Converter                      |
| <b>dB</b>     | Decibel                                            |
| <b>DHCP</b>   | Dynamic Host Configuration Protocol                |
| <b>DP</b>     | DisplayPort                                        |
| <b>DVI</b>    | Digital Visual Interface                           |
| <b>EDID</b>   | Extended Display Identification Data               |
| <b>GbE</b>    | Gigabit Ethernet                                   |
| <b>Gbps</b>   | Gigabits per second                                |
| <b>GUI</b>    | Graphical User Interface                           |
| <b>HDBT</b>   | HDBaseT                                            |
| <b>HDCP</b>   | High-bandwidth Digital Content Protection          |
| <b>HDMI</b>   | High-Definition Multimedia Interface               |
| <b>HDR</b>    | High Dynamic Range                                 |
| <b>IP</b>     | Internet Protocol                                  |
| <b>IR</b>     | Infrared                                           |
| <b>kHz</b>    | Kilohertz                                          |
| <b>LAN</b>    | Local Area Network                                 |

| ACRONYM                   | COMPLETE TERM                                               |
|---------------------------|-------------------------------------------------------------|
| <b>LED</b>                | Light-Emitting Diode                                        |
| <b>LPCM</b>               | Linear Pulse-Code Modulation                                |
| <b>MAC</b>                | Media Access Control                                        |
| <b>MHz</b>                | Megahertz                                                   |
| <b>OSD</b>                | On-Screen Display                                           |
| <b>PD</b>                 | Powered Device                                              |
| <b>PoH</b>                | Power over HDBaseT                                          |
| <b>PSE</b>                | Power Sourcing Equipment                                    |
| <b>SNR</b>                | Signal-to-Noise Ratio                                       |
| <b>TCP</b>                | Transmission Control Protocol                               |
| <b>THD+N</b>              | Total Harmonic Distortion plus Noise                        |
| <b>TMDS</b>               | Transition-Minimised Differential Signaling                 |
| <b>4K UHD</b>             | 4K Ultra-High-Definition (10.2Gbps max)                     |
| <b>4K UHD<sup>+</sup></b> | 4K Ultra-High-Definition (18Gbps max)                       |
| <b>USB</b>                | Universal Serial Bus                                        |
| <b>VGA</b>                | Video Graphics Array                                        |
| <b>WUXGA (RB)</b>         | Widescreen Ultra Extended Graphics Array (Reduced Blanking) |
| <b>XGA</b>                | Extended Graphics Array                                     |
| <b>Ω</b>                  | Ohm                                                         |
